CERTIFICATIONS

Salesforce Certified
Force.com Developer

EXPERIENCE

Oktana / PM - Senior Developer
April 2015 - Present

- Plan, control and implement projects of different types and sizes for various clients.
- Communicate remotely with clients on a daily basis to report progress and solve issues and roadblocks.
- Code frontend and backend user stories using VisualForce and Lightning user interfaces.
- Develop backend functionality by writing scripts to manage large amounts of data without surpassing Salesforce's governor limits.
- Advise both developers and customers on implementation strategies and best practices.
- Design and implement the integration between Salesforce and services like Facebook, Twitter and Google.
- Migrate data from Salesforce applications by using Heroku.

LAST RELEVANT PROJECT:
<u>Anthos / Senior Developer</u>
In order to better manage investments, Anthos needed an alert system to inform them of when social media popularity spiked in their companies. The firm's main objective was to attain above-average risk-adjusted rates of return.
Developed solutions in Heroku and Salesforce. Within these platforms, My team and I leveraged different technologies to construct a well-rounded application to enhance and simplify client management for Anthos.

Timba Software / Team Lead
April 2009 - April 2015

- Act as a Developer Team Lead for Salesforce for Twitter and Facebook application.
- Develop and implement new features as well as maintaining existing ones.
- Provide customer support and work closely with Salesforce in resolving issues reported by customers.
- Design and integrate Salesforce with Facebook and Twitter APIs.
- Implement features that allow users to provide support as a call center within Salesforce, on issues that were discussed on Facebook and Twitter.
- The application stored keyword related Tweets and Facebook Messages in Salesforce and allowed customer reps to provide support on the issues being discussed.

Key technologies used: Apex, and VisualForce as well as JavaScript.

Binbit / Senior Developer
January 2009 - December 2009
Create, maintain and improve systems for data management for the internal use using a LAMP stack.

Live Interactive S.A / Senior Developer
November 2005 - February 2009
- Work in product development and maintenance of the company's main product line.
- Research to find solutions and develop tools for internal use for the company.
- Design and develop a custom CMS for internal use.
- Graphic Designer; designing in Photoshop and then translating those designs to HTML, using CSS.

Key technologies used: Apache Server, PHP, MySQL and Symphony.

Soluciones Informaticas / Developer
November 2003 - November 2005
- Develop software for Palms OS.
- Develop and manage Company Websites with PHP and MySQL.

RECOMMENDATION

— Nisha Nambiar, Senior Engineer, Royal Caribbean Cruise Lines

"Schubert has been instrumental in his Salesforce development work for our project. It was a completely new business area for him but he tried to understand the business rules very

well and adapt to our development process. He was very prompt in responses and always available to answer any question. His work was very thorough. He was receptive of the changes. He was also able to communicate very well with our team. He is a very humble person. Overall it was a pleasure to work with him."

— Brett Weigl, VP, Product Management - Digital Service Engagement at Salesforce

"Schubert is a professional and highly productive developer who knows Salesforce's Force.com platform and web technologies in general through and through. I have always been impressed by Schubert's responsiveness and ability to work through tough problems under short timelines. I would definitely work with Schubert again and trust him with high profile projects."

— Eric Moore, Support Tools and Products Manager, Google

"Schubert is an excellent developer and provides solid code for critical features. Schubert is an expert in building products on the salesforce platform that scale and that are easy to use. He is proactive, thoughtful, and innovative in his approaches to solving bugs and developing new functionality. I really enjoy working with Schubert and would recommend him him as a developer for any product team."

— Lauren Ingram, Director, PwC Technology - Marketing & Sales Product Lead at PwC

"Salesforce hired Altimetrik (formerly Timba) to build and maintain the "Salesforce for Twitter & Facebook" application. Schubert has worked on the project since January 2009, and is now the team lead. Over the years, he has demonstrated a deep knowledge of Salesforce Apex, Visualforce, and the AppExchange, and
an ability to develop complex software integrating with external platforms (Twitter, Facebook, Klout, etc)
in a customer-friendly way. Schubert also helped build and maintain the test suite for the project, and has successfully assisted on multiple customer calls & fixes."
